

## LIST OF THE SPIDERS (ARACHNIDA: ARANAEAE) FROM ROMANIA

INGMAR WEISS, ANGELA PETRIȘOR

### Abstract

A revised check list of 973 species of spiders (Arachnida: Araneae) from Romania is presented. Only 118 species (12%) have not been found in recent times and are not available in arachnological collections for re-examinations.

### Résumé

Les auteurs dressent une liste révisée de 973 espèces d'Araignées de Roumanie. Seulement 118 espèces (12%) n'ont pas été retrouvées récemment (y compris dans des collections).

**Keywords:** Arachnida, Araneae, check list, Romania

### INTRODUCTION

Three decades have passed since the first list of spiders from Romania, made by Fuhn & Oltean (1970), was published. Within this time important changes happened in the taxonomy and nomenclature of the group.

Accumulation of some recent faunistic data from different regions of the country and the creation of some important collections led to a critical review of information included in the first list and, also, made necessary its republication, for being a proper source of information for the future faunistic researches.

### MATERIAL AND METHODS

The nomenclature and systematical classification of the spider families was up-dated, according to Platnick (1997).

In the list, the following information was included:

- L** – Species mentioned by Fuhn & Oltean (1970) exclusively on the base of the bibliographical data known up to 1970. That time, for these species, no material in the spider collections from Romania was present.
- (?)**– Species mentioned in L columns, whose presence couldn't be confirmed by the recent studies and whose presence in the Romanian fauna is still doubtful.
- F** – Species verified by Fuhn & Oltean (1970) on the base of the material, present that time in collections.
- A** – Spider species present in the collections of "Grigore Antipa" National Museum of Natural History from Bucharest.
- S** – Spider species from the collections of the Museum of Natural History from Sibiu/"Brukenthal" Museum (Weiss 1998 b). For spider species mentioned from the Romanian fauna after 1970, for which we do not have necessary data in the two collections A+S, we specify the main public collections and the place where the respective material can be studied.
- Bu** – Spider collection of „Traian Săvulescu“ Institute of Biology from Bucharest.
- Sp** – Spider collection of „Emil Racoviță“ Institute of Speleology from Bucharest.
- Cj** – Spider collection of the Museum of Zoology of the University from Cluj-Napoca.
- Lz** – Biologie-Zentrum des Oberösterreichischen Landesmuseums Linz, Austria.
- Pg** – National Museum from Prague

The last column includes the synonyms of the species in the first list (1970) – respectively for the species published later on – denomination at their first mention from the Romanian fauna. The name of the reidentified species were written between /brackets/.

## RESULTS

The following species from the list of the spiders, published by Fuhn & Oltean (1970), were removed:

1. Nomina dubia:

*Harpactea cognata* (L. Koch, 1870); *Harpactea lehoni* (Becker, 1879); *Theridion undulatum* Westring, 1862; *Caracladus crassipalpus* (Menge, 1868); *Sintula affinoides* Kolosváry, 1934; *Tapinocyba transylvanica* Kolosváry, 1934; *Cyclosa baloghi* Kolosváry, 1934; *Cybaeus strandi* Kolosváry, 1934; *Drassodes montandoni* (Becker, 1879); *Drassodes murinus* (Hahn, 1834); *Micaria lucasi* Thorell, 1871; *Zelotes ater* (Hentz, 1832); *Zelotes nanus* (Thorell, 1875).

2. Species described by Bösenberg: see Braun (1982)

*Centromerus ludovici* Bösenberg, 1899; *Centromerus obscurus* Bösenberg, 1902; *Diplocephalus buddebergi* (Bösenberg, 1899); *Gonatium fuscum* Bösenberg, 1902; *Gonatium insigne* Bösenberg, 1902; *Gonatium pallidum* Bösenberg, 1902; *Lophomma rufipes* Bösenberg, 1902; *Oedothorax subniger* (Bösenberg, 1902); *Pelecopsis subfuscus* (Bösenberg, 1902); *Zelotes kulczynskii* (Bösenberg, 1902).

3. Species removed because of chorological/biogeographical reasons:

*Atypus affinis* Eichwald, 1830; *Tetragnatha isidis* Simon, 1880; *Araneus pulcherrimus* Roewer, 1942; *Araneus venatrix* (C.L. Koch, 1839); *Cyclosa strandi* Kolosváry, 1934; *Cybaeus tetricus* (C.L.Koch, 1839); *Coelotes kulczynskii* (Drensky, 1915); *Ozyptila bicuspis* Simon, 1932; *Dendryphantes catus* (Blackwall, 1867); *Pellenes campylophorus* (Thorell, 1875); *Saitis barbipes* Simon, 1868.

From Romania, as yet, 973 spider species belonging to 34 families are mentioned.

For 490 species from the present list, mentions were verified by Fuhn & Oltean (1970) according to the spider collections present that time. 304 species were included in the first list taking into consideration only the literature. The difference of 56 species from 850 species (included in the first list) results from the removing of 34 species (Nomina dubia,

reidentifications, doubtful species from a biogeographical point of view) respectively from 22 double citings (synonyms).

Spider collection of "Grigore Antipa" National Museum of Natural History from Bucharest consists of 326 species, as yet. At the Museum of Natural History from Sibiu 649 species collected from Romania are preserved (Weiss, 1998 b). Other 58 species, recently found in the Romanian fauna, are preserved in other public collections (mentioned in the list).

Thus, spider fauna from Romania consists of 855 species, whose presence is noted and can be verified in the scientifical collections.

The presence of 118 species (12%) – mentioned in literature – is still doubtful.

#### ACKNOWLEDGEMENTS

We thank sincerely to Dr. Sándor Mahunka (Hungarian Natural History Museum, Budapest) for his information on the type material of the spider species from Transylvania, described by G. Kolosváry.

### LISTA ARANEEELOR (ARACHNIDA: ARANEAE) DIN ROMÂNIA

#### REZUMAT

Se prezintă lista actualizată a speciilor de aranee din România pe baza datelor din literatură, precum și a colecțiilor arahnologice existente la Muzeul Național de Istorie Naturală „Grigore Antipa“ și Muzeul de Istorie Naturală din Sibiu/Muzeul Național „Brukenthal“.

În prezent, din România sunt semnalate 973 specii de aranee din 34 de familii.

Pentru 490 specii din actuala listă, semnalările au fost verificate de Fuhn & Oltean (1970) pe baza colecțiilor arahnologice existente la acea data. Un număr de 304 specii au fost incluse în prima listă doar pe baza datelor din literatură. Diferența de 56 de specii până la numarul total de 850 de specii (cuprinse în prima lista), rezultă din necesitatea eliminării a 34 de specii (Nomina dubia, redeterminări, specii puțin probabile din punct de vedere biogeografic) respectiv din 22 citări duble (sinonime).

Colecția de aranee a Muzeului Național de Istorie Naturală „Grigore Antipa“ din București cuprinde în prezent 326 specii. La Muzeul de Istorie Naturală din Sibiu se păstrează 649 specii colectate de pe teritoriul

României (Weiss, 1998). Alte 58 de specii recent descoperite în fauna României sunt depozitate în alte colecții publice (specificate în listă). Astfel, fauna de aranee din România cuprinde 855 specii a căror prezență este documentată și poate fi verificată în colecțiile științifice.

Prezența a 118 specii - semnalate în literatură - ramâne deocamdată incertă (12%).
